Blazingboost, Poland   Sep 2022 – May 2025
Frontend Software Engineer

- One of the leading companies providing in-game services to video game players of various well known online video games
- Responsible for designing and development of main company product and side projects
- Contributing to early quality activities, including peer reviews of estimates, designs and code
- Collaborating with Software Engineers, Product Managers, QA, Architect, Designers and building effective communication with the team regarding technologies and implementations
- Refactoring legacy code and splitting it into separate components, which accelerated further development and made the project easier to maintain
- Rewriting jQuery code to vanilla JavaScript, which helped speed up the application and reduce the size of the final build
- Sharing knowledge and best practices to the team
- Contributed to: Webpack configuration, Docker configuration, CWV optimization
- Participating in product meetings, suggesting project improvements and estimate tasks
- Technologies: React, JS, Zustand, Redux, Zend, PHP, Docker, SASS, Webpack, HTML

Achievements

- Reduced final bundle of application
- Refactored Legacy code base to ES6 syntax
- Initialized a component library implementation for code reuse

Hyperion Tech   Apr 2021 – Sep 2022
Frontend Software Engineer

- Dedicated IT teams company for mid and long-term software projects
- As a Frontend Engineer on a team that supported and developed 10 web resources, I was responsible for developing new features, upgrading old components, and working with ad hoc requests from the business side
- Close cooperating with a professional team of Software Engineers, Designer, DevOps, QA, Product Owners, Business Analytics, Scrum Master
- Providing and receiving feedback constructively
- Developed and delivered new features and new components for admin panel and client side of applications
- Participated in estimation of new features and business tasks
- Conducted demo sessions for stakeholders and admin panel users
- Writing a technical documentation and "How to use" instructions
- Worked with WordPress Gutenberg blocks and solved all related technical tasks
- Designed well-structured, maintainable, quality code. Contributed to all stages of the project and estimate tasks
- Provided CWV optimization, Webpack and Gulp configuration as part of the project, which allowed us to get good performance of our projects and make them easier to maintain and scale.
- Technologies: JS, Sass, React.js, Wordpress, Gutenberg blocks, PHP, HTML, CSS, Jenkins

Achievements
- Improved the performance of our projects by splitting the code into separate components that can be used across all our projects
- Suggested and implemented CWV improvements that helped raise our projects in Google search results
